

Introduction to Modules at CHPC

Zhiyu (Drew) Li & Anita Orendt
Research Consulting & Faculty Engagement
Center for High Performance Computing
{zhiyu.li; anita.orendt}@utah.edu

Overview of Talk

- Why Modules
- Where to find more information
- How to setup to use modules
- Module basics
- Demonstration

What modules do

- Modules are a way of managing the user's shell environment in an interactive session or a batch job

Why Modules

- Modules lets users dynamically change the Shell Environment – including easily adding and removing directories needed for a given task from system **Environment Variables**, eg **\$PATH**, without needing to log out and back in
- Easy to switch between version of a package or application – again without having to start a new session
- Useful when packages have conflicts in their environment settings

Module Documentation at CHPC

- <https://www.chpc.utah.edu/documentation/software/modules.php>
- <https://www.chpc.utah.edu/documentation/software/modules-advanced.php>
- Video -- <https://youtu.be/Cu6C5INLDAY>

We make use of TACC's LMOD

- <https://www.tacc.utexas.edu/research-development/tacc-projects/lmod>

- LUA based

All accounts automatically use modules –

- This is done via the login scripts (dot files) CHPC provides in home directories, even if you have older versions
- **DO NOT** make changes in the **.tcshrc** and **.bashrc**
- Use the **.custom.csh/.custom.sh** to customize environment variables and/or pre-load modules for programs regularly used in ssh sessions
- Use **.aliases** file to create aliases (but not environment variables); if this file exists it will be sourced during login
 - `alias c='clear'`
- You may reset login scripts (dot files) if necessary
 - CHPC official version: `/uufs/chpc.utah.edu/sys/modulefiles/templates`

Basic Module commands

- **module** - shows the list of module commands
- **module load <name>** - loads module name (shortcut: **ml <name>**)
- **module unload <name>** - unloads module name (**ml -<name>**)
- **module avail** - shows a list of "available" modules (**ml av**)
- **module list** - shows a list of loaded modules (**ml**)
- **module help** - prints help for the module command
- **module help <name>** - prints help for module
- **module show <name>** - prints the module file (lua)
- **module purge** - unload all modules
- **module reset system** – resets to system default
- **module swap <name1> <name2>** - swaps between two modules
- **module spider <string>** - shows all modules that have string in name

Explore CHPC Modules

- **module list (ml)** – see what are currently loaded

```
[class99@linuxclass:~]$ module list

Currently Loaded Modules:
  1) chpc/1.0 (S)

Where:
  S: Module is Sticky, requires --force to unload or purge
```

- **Naming Convention** <name>/<version>
- **module load <name>/<version>** -- load a module
 - **module load <module1> <module2> ...<moduleN>**

```
[class99@linuxclass:~]$ module load matlab/R2022a
[class99@linuxclass:~]$ module list

Currently Loaded Modules:
  1) chpc/1.0 (S)  2) matlab/R2022a

Where:
  S: Module is Sticky, requires --force to unload or purge
```

```
[class99@linuxclass:~]$ which matlab
/uufs/chpc.utah.edu/sys/installdir/matlab/R2022a/bin/matlab
```

Explore CHPC Modules (cont.)

- **module purge** – unload all modules

```
[class99@linuxclass:~]$ module purge
```

```
[class99@linuxclass:~]$ module list
```

```
Currently Loaded Modules:  
 1) chpc/1.0 (S)
```

```
[class99@linuxclass:~]$ which matlab  
/usr/bin/which: no matlab in (/uufs/chpc.utah.edu/sys/bin:/usr/sbin)
```

- **Load a default module** (not specify the version)

```
[class99@linuxclass:~]$ module load matlab  
[class99@linuxclass:~]$ module list
```

```
Currently Loaded Modules:  
 1) chpc/1.0 (S)  2) matlab/R2023b
```

Where:

S: Module is Sticky, requires --force to unload or purge

```
[class99@linuxclass:~]$ which matlab  
/uufs/chpc.utah.edu/sys/installdir/matlab/R2023b/bin/matlab
```

Module Avail command

- **module avail (ml av)** – what modules are currently loadable
 - Not an exhaust list of CHPC modules
 - Show Loadable modules at the moment
 - Standalone
 - Dependent modules are already loaded in current environment
 - List may change when other modules get loaded or unloaded
 - Marks default (D), already loaded (L), gpu specific (g) and aliases

```
masurca/3.3.1
mathematica/12.3.1
mathematica/13.3.1
mathematica/14.0.0          (D)
matlab/R2021b
matlab/R2022a
matlab/R2022b
matlab/R2023a
matlab/R2023b              (L,D)
maven/3.3.3
maxquant/1.6.10.43
medaka/1.5.0                (g)
medaka/1.6.1                (g)
medaka/1.7.2                (g,D)
medea/3.7.2
mega2/6.0.0
megadetector/4.1
megalodon/2.3.3
mercurial/3.6
merlin/1.1.2
mesa/r15.14.0
```

CHPC Module Organization

- Core
 - Contains modules for applications independent of both the compiler and MPI implementation
- Compiler
 - Contains modules for applications dependent on a compiler (& version) but not on a MPI implementation
- MPI
 - Contains modules for applications dependent on both a compiler and a MPI implementation

Modules themselves are named by application name/version

Module Avail command (cont.)

- `module load gcc/8.5.0 → module av`

```

--- /uufs/chpc.utah.edu/sys/modulefiles/spack/linux-rocky8-x86_64/Compiler/linux-rocky8-nehalem/gcc/8.5.0 ---
boost/1.77.0                               mpich/4.1.2
cantera-pokitt/develop                     mvapich2/2.3.6 (D)
cdo/2.0.5 (D)                             mvapich2/2.3.7
fftw/2.1.5                                 netcdf-c/4.8.1
fftw/3.3.10 (D)                          netcdf-cxx/4.2
gdal/3.3.2 (D)                          netcdf-fortran/4.5.3
geant4/10.7.3                             openblas/0.3.18
geant4/11.0.3 (D)                       openkim-models/2021-01-28
gsl/2.7 (D)                             openmpi/4.1.1 (L)
hdf4/4.2.15 (D)                       openmpi/4.1.3-gpu (g)
hdf5/1.10.7                              openmpi/4.1.3
hoomd-blue/2.5.0-gpu-mkl (g)            openmpi/4.1.4 (D)
hoomd-blue/2.5.0-gpu-obl (g,D)         openmpi/4.1.5-gpu (g)
hysplit/5.2.3                            openmpi/4.1.5
intel-mpi/2019.10.317                   openmpi/4.1.6-gpu (g)
intel-oneapi-mkl/2021.4.0               openmpi/4.1.6
intel-oneapi-mkl/2022.0.2               py-numpy/1.19.5-mkl
intel-oneapi-mkl/2022.2.1               py-numpy/1.19.5-obl
intel-oneapi-mpi/2021.1.1 (D)           py-numpy/1.19.5
intel-oneapi-mpi/2021.2.0               py-numpy/1.21.3-p38

```

- `module load openmpi/4.1.1 → module av`

```

--- /uufs/chpc.utah.edu/sys/modulefiles/spack/linux-rocky8-x86_64/MPI/linux-rocky8-nehalem/gcc/8.5.0/openmpi/4.1.1 ---
hdf5/1.8.22    hypre/2.23.0    parallel-netcdf/1.12.2
hdf5/1.10.7    lammmps/20220107    petsc/3.16.4
hyphy/2.5.41   netcdf-c/4.8.1     wi4mpi/3.5.0

```

Module Avail command (cont.)

- module load hdf5/1.10.7 → which h5diff

```
[class99@linuxclass:~]$ module load hdf5/1.10.7  
[class99@linuxclass:~]$ module list
```

Currently Loaded Modules:

1) chpc/1.0 (S) 2) gcc/8.5.0 3) openmpi/4.1.1 4) hdf5/1.10.7

Where:

S: Module is Sticky, requires --force to unload or purge

```
[class99@linuxclass:~]$ which h5diff  
/uufs/chpc.utah.edu/sys/spack/linux-rocky8-nehalem/gcc-8.5.0/hdf5-1.10.7-fcipy  
pb7a7hytf7lwlba7sgwx6hkenyv/bin/h5diff
```

- Note: For a specific application (<name>/<version>), there might be multiple modules installed by different compilers and/or mpi implementations --- **For reproducibility, take notes on dependency modules as well as the target module.**

Module Spider command

- Most of the time, we want to do direct searches
 - Is a module installed on CHPC?
 - What versions do you have?
 - How do I load it? (what dependencies needed?)

- **module spider <string>**

- show all versions

```
[class99@linuxclass:~]$ module spider hdf5
```

```
-----
hdf5:
-----
```

Versions:

```
hdf5/1.8.19
hdf5/1.8.22
hdf5/1.10.7
hdf5/1.12.2
hdf5/1.14.1-2
```

Other possible modules matches:
phdf5

- **module spider <name>/<version>**

- show how to load a specific module

```
[class99@linuxclass:~]$ module spider hdf5/1.10.7
```

```
-----
hdf5: hdf5/1.10.7
-----
```

You will need to load all module(s) on any one of the lines before the "hdf5/1.10.7" module is available to load.

```
gcc/11.2.0 openmpi/4.1.6
gcc/11.2.0-cpu openmpi/4.1.6
gcc/11.2.0-gpu openmpi/4.1.6
gcc/8.5.0
gcc/8.5.0 intel-oneapi-mpi/2021.4.0
gcc/8.5.0 openmpi/4.1.1
intel-oneapi-compilers/2021.4.0
intel-oneapi-compilers/2021.4.0 intel-oneapi-mpi/2021.4.0
intel-oneapi-compilers/2021.4.0 openmpi/4.1.1
intel/2018.5.274
nvhpc/21.5
nvhpc/21.5-nompi
nvhpc/21.7
```

Module Show command

- Format `module show <module-name>/<version>`
- Shows you the content of the module file (lua)
- This is useful if there is information on running the program included in the module
- Only works if module is available, i.e., you have modules that it depends on loaded

```
[class99@linuxclass:~]$ module show matlab/R2023b
-----
  /uufs/chpc.utah.edu/sys/modulefiles/CHPC-r8/Core/matlab/R2023b.lua:
-----
help([[This module sets the variables for Matlab R2023b
]])
setenv("MATLAB_ROOT", "/uufs/chpc.utah.edu/sys/installdir/matlab/R2023b")
setenv("MLM_LICENSE_FILE", "27000@ls1.chpc.utah.edu,27000@ls2.chpc.utah.edu,27000@ls3.chpc.utah.edu")
prepend_path("PATH", "/uufs/chpc.utah.edu/sys/installdir/matlab/R2023b/bin")
whatis("MATLAB R2023b")
whatis("http://www.mathworks.com")
whatis("Installed on 09/21/2023")
family("matlab")
```

Other Information

- We also define module “families”; can only have one module in a family loaded at one time
 - Used for python, compilers, mpi, R
 - For example, if you have intel loaded, and load any gcc it will unload intel
- Parallel versions of boost, HDF5 have separate modules
 - hdf5 for module for serial build, phdf5 for module for parallel build
 - boost for serial, pboost for parallel

Default, aliases, and hidden modules

- For some applications have a default module – one that is installed if you do not provide a specific version
 - Typically, but not always, the latest version is specified to be the default
- For some modules, especially those with long version names, there is also an alias defined
- We have depreciated older installations and their modules so some modules have been hidden
 - Many depreciated modules were from old OS, so some may not work on current OS
 - **module --show_hidden avail**

Rocky8 changes

- For intel compilers
 - intel-oneapi-compilers
- For intel mpi
 - intel-oneapi-mpi
- For intel mkl
 - intel-oneapi-mkl
- For netcdf
 - netcdf-c, netcdf-cxx, netcdf-fortran
- For pgi – now nvhpc
- For gcc – default version is gcc/8.5.0

Rocky8 changes

- For python
 - No /usr/bin/python, instead there is /usr/bin/python2 (2.7.18), /usr/bin/python3 (3.6.8)
 - For these we have created modules python/2.7.18 and python/3.6.8 so that these can be used with 'python'
 - CHPC installed 3.10.3 is default when using ml python
- For R
 - 4.2.2 is default
 - Can still use the containerized builds of R
 - R/4.1.2-basic
 - R/4.1.2-bioconductor
 - R/4.1.2-geospatial

Getting Help

- CHPC website
 - www.chpc.utah.edu
 - Getting started guide, cluster usage guides, software manual pages, CHPC policies
- Service-Now issue/incident tracking system
 - Help Desk: helpdesk@chpc.utah.edu
- We use chpc-hpc-users@lists.utah.edu for sending messages to users
